

① CPU scheduling algo

- FCFS
- SJF
 - └ SMTF
 - └ SRTF
- Round Robin
- Priority Queue

- Multilevel Queue

- IPC

- └ Independent process
- └ Co-operative Process

- Share Memory
- Pipe
- msg Queue
- Signal
- socket

- SYN tool

- 1 - Semaphore
 - └ classic/Counting
 - └ Binary
- 2 - mutex

→ Deadlock Char

- 1 - Mutual Exclusion
- 2 - No Preemption
- 3 - Hold wait
- 4 - Circular wait

* Deadlock prevention

* Deadlock Detect & Avoid

- Deadlock Recover
 - Resource Preemption
 - Process Kill

- Memory types - (CF)

* Memory Management

* Swap Area

HDD

8gb

* Swap Area

- To extension main memory

* MMU

* Memory Allocation

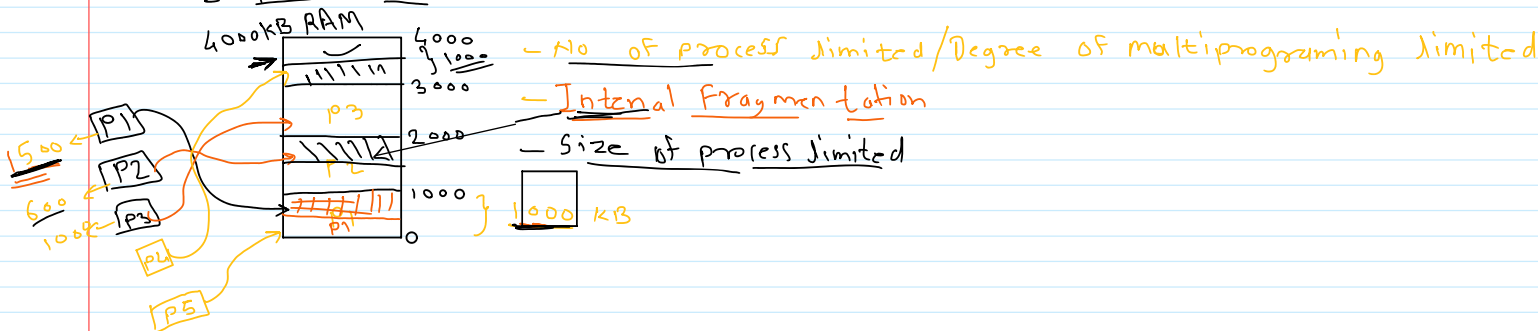

- ① Contiguous M.A
- ② Non-Contiguous M.A

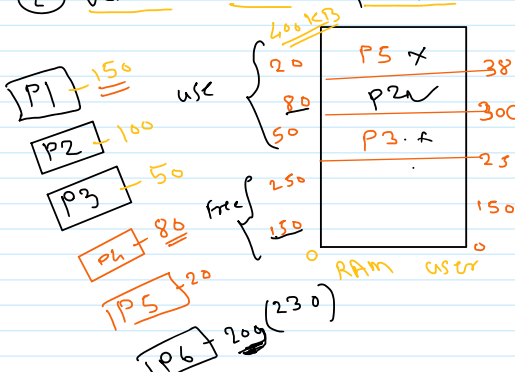

① Contiguous M.A.

- 1 - Fixed Size Partition

② Variable Size Partition

Advant.

- ① No I.F.
- ② process size Not limited
- ③ Degree of M.P Not Fixed

Disadvantage

- External Fragmentation

IPS 12
 [P6] 20g (230)

- External Fragmentation

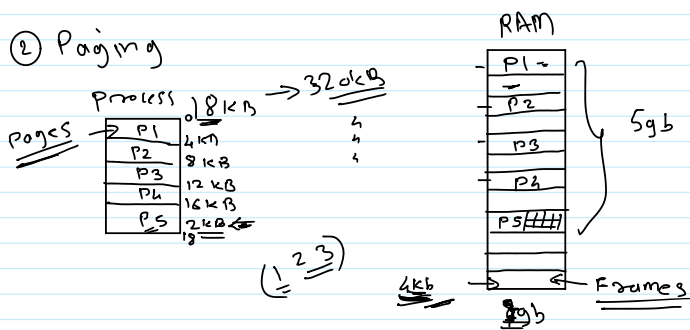

② Non-Contiguous M.A

① Segmentation

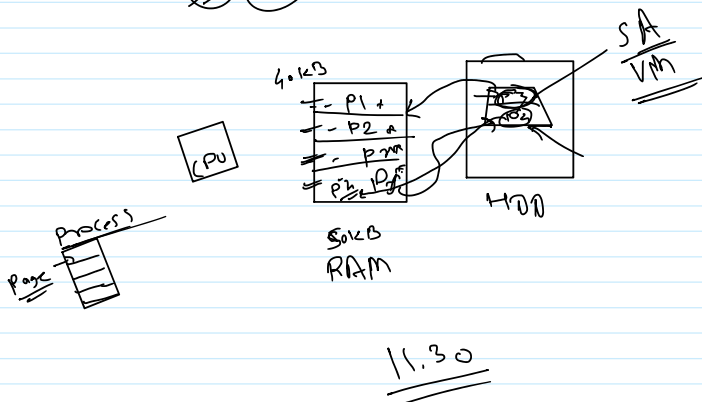

② Paging

② Paging

Virtual mem

Frame Count = 3

FIFO Page Replacement

Pages	1	2	3	4	1	2	5	1	2	3	4	5
F1	1	1	1	4	4	4	5	5	5	5	5	5
F2		2	2	2	1	1	1	1	1	3	3	3
F3			3	3	3	2	2	2	2	2	4	4
	F	F	F	F	F	F	Hit	Hit	F	F	Hit	Hit

Number of Page Fault = 9

(Belady's Anomaly)

Hit = 3
Fault = 9

Avg Hit Ratio = $\frac{3}{12}$
Avg F.R = $\frac{9}{12}$

ORR = Replace Not use near future

Frame Count = 3

Optimal Page Replacement

Pages	1	2	3	4	1	2	5	1	2	3	4	5
F1	1	1	1	1	1	1	1	1	1	3	3	3
F2		2	2	2	2	2	2	2	2	2	4	4
F3			3	4	4	4	5	5	5	5	5	5
	F	F	F	F	H	H	F	H	H	F	F	Hit

Number of Page Fault = 7

Hit = 5

LRU

Frame Count = 3

LRU Page Replacement

Pages	1	2	3	4	1	2	5	1	2	3	4	5
F1	1	1	1	4	4	4	5	5	5	3	3	3
F2		2	2	2	1	1	1	1	1	1	4	4
F3			3	3	3	2	2	2	2	2	2	5
	F	F	F	F	F	F	H	H	H	F	F	F

Number of Page Fault = 10

Implementation: Stack based approach -- O(n)

Second chance LRU -- Approximate LRU (similar) -- O(1)

O(n)

* File management
